ROUNDTABLE DISCUSSION

The last five years finally showed that it is possible to capture non-financial and intangible value, and to transact these 'soft' values to 'hard' outcomes. The burgeoning of Blockchain, AI and IoT have enabled the blending of these tech revolutions across HumTech, SocialTech, FaithTech and FinTech.

This meeting is to explore the learning from the merging of these sectors as it stands, and to bring the convening power of collective interest to design a series of proof of concept pilots in real world applications.

This is a roundtable discussion of likeminded peers – experts, service users, visionaries, and those interested in what the fruition of these solutions will mean to the world.

ROUNDTABLE DISCUSSION LEADS
